

Extra Lab Sailpoint: 2407

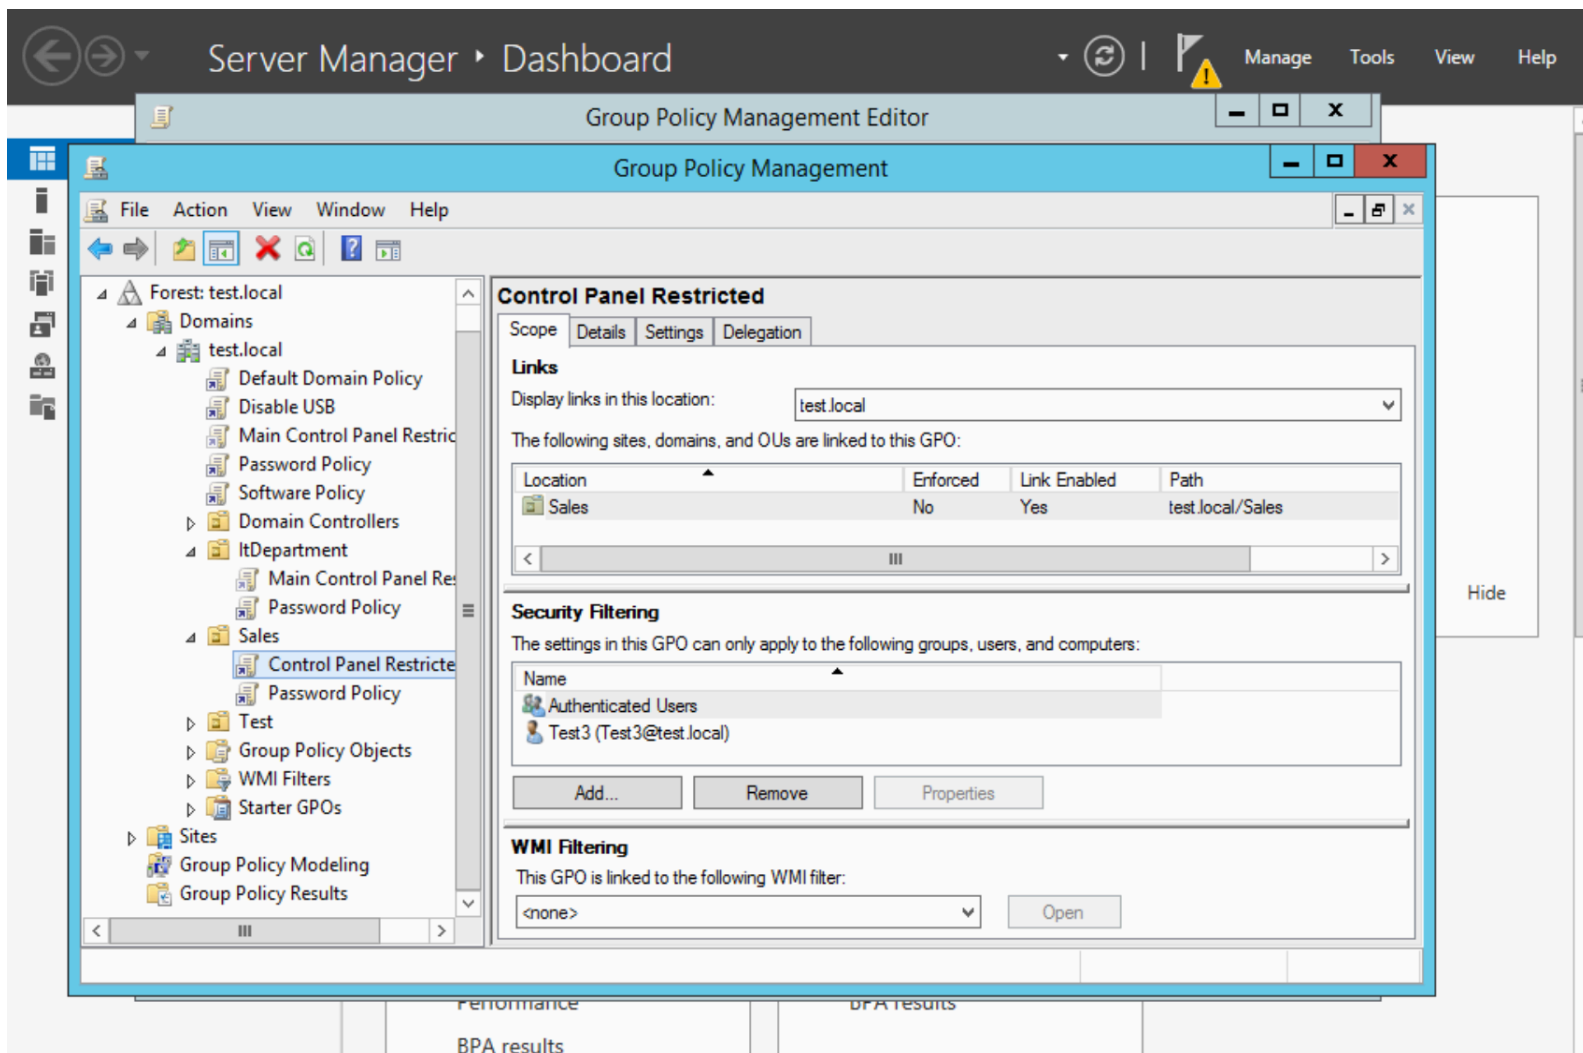

Lab Leaders: Nick Chavoulev, Jasper Gray

Instructor: Satinder Kaur

Throughout the training process, Satinder Kaur has encouraged the cohort to participate in an exercise that will help further knowledge about active directory, users, groups, organizational units and organizational unit policies. Nick Chavoulev and Jasper Gray established a server and client on the application, VMware Workstation Pro 17, so that they could complete extra tasks given to the cohort. There were several tasks completed throughout this experience, the final one, a culmination of several lessons, being to create an organizational unit policy that would prevent a given organizational unit from accessing control panel settings on the client side machine.

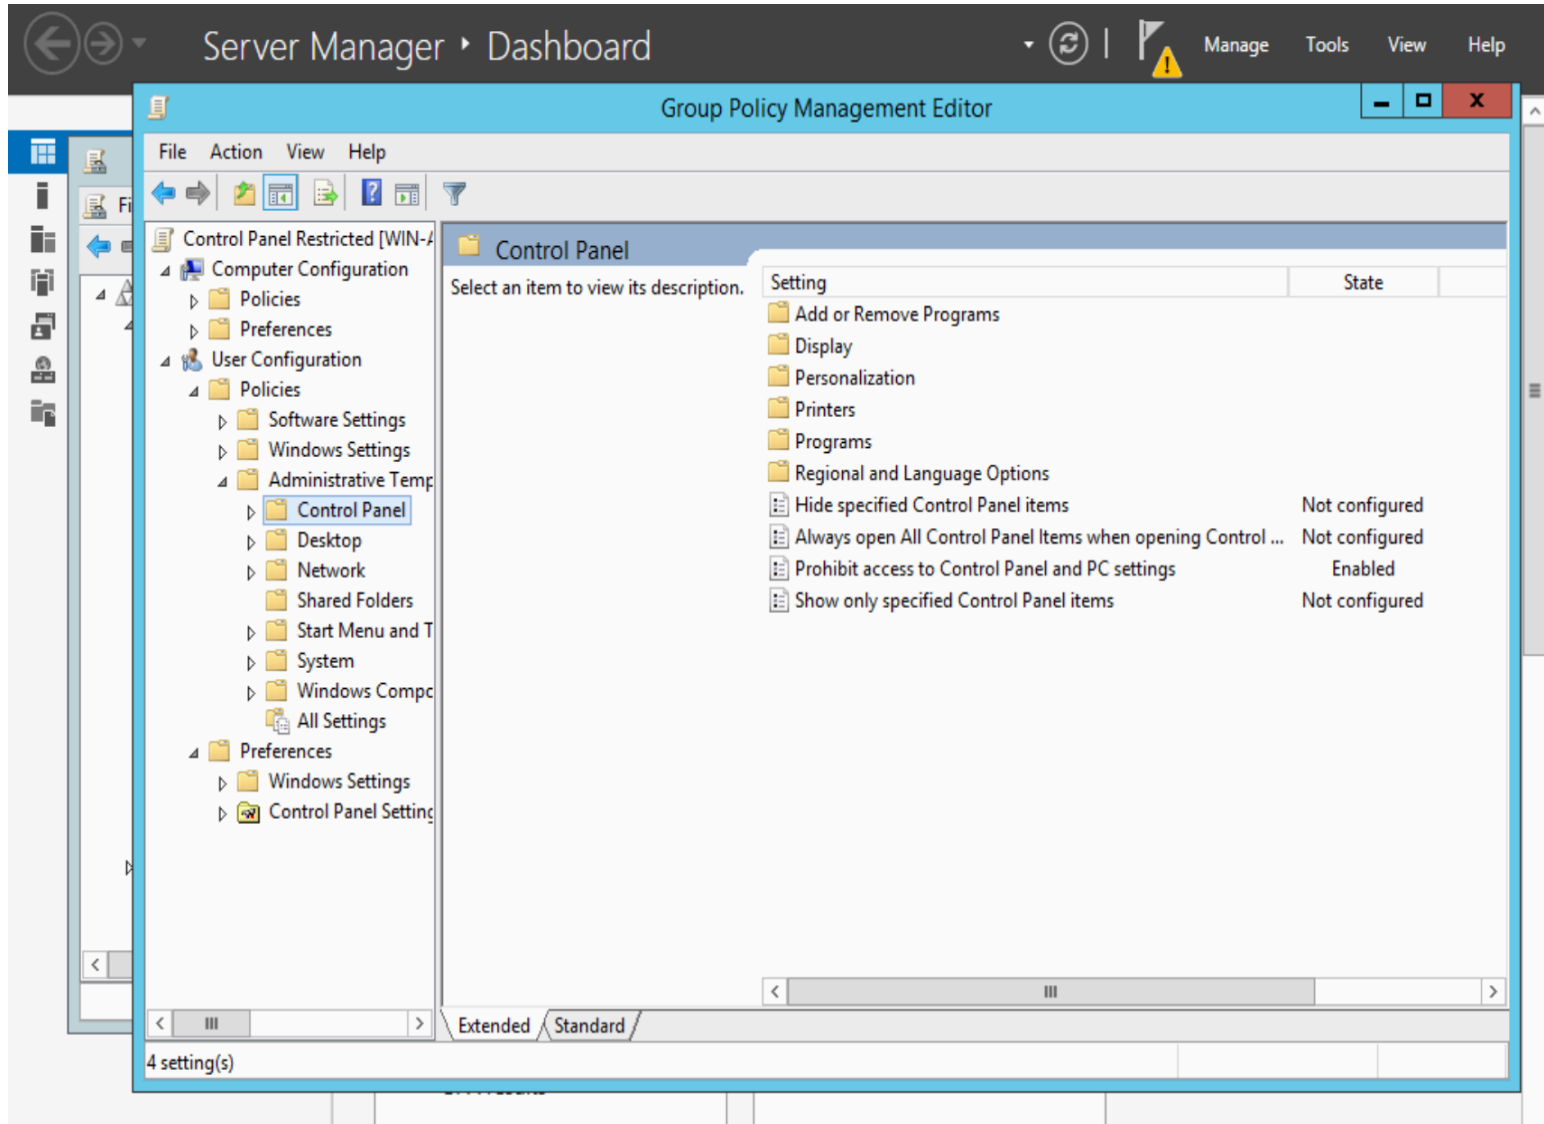

Step One - Establishing an GPO

Firstly, the group policy management section for server manager tools was opened. Under the given organizational unit, sales, the team created and linked an GPO titled Control Panel Restrictions.

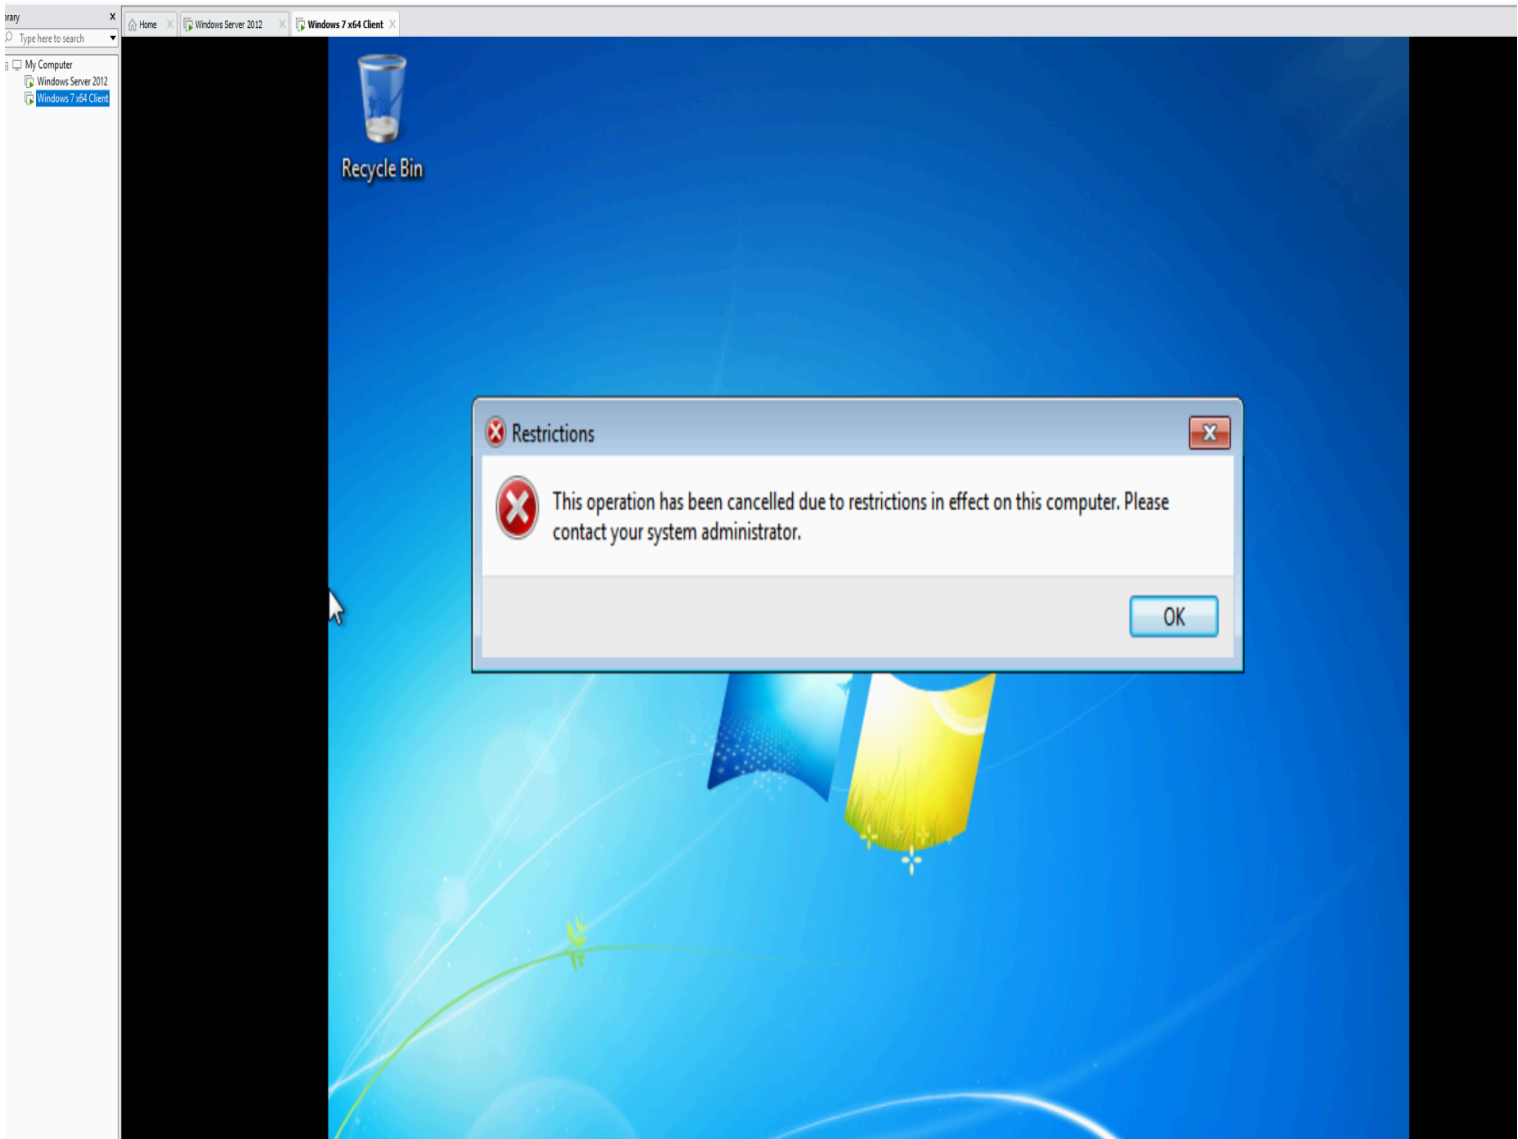

Step Two - Enabling Specific Policy

Second, the user configuration policy under administrative template policies -> control panel policies, the group enabled, Prohibit access to Control Panel and PC settings. Enabling this policy for the sales organizational unit, meaning that any users or groups under the organizational unit of sales would be unable to access the control panel or PC settings.

Step Three - Testing the Client

After enabling the organizational group policy for sales, the group logged into sales user test1 under sales. After attempting to open the control panel, for the sales user test1, the policy that was placed over the control panel was enforced.

Prior Tasks:

In order to establish the lab, the team was required to complete several steps. Without any of these steps, this report would be impossible to complete. The following steps are general outlines of the processes completed:

- Establishing Virtual Machine Server and Client
- Establishing IP configurations and establishing network between Server and Client
- Establishing the Active Directory
- Establishing Users and Groups within the active directory

Acknowledgments:

Group Leaders: Nick Chavoulev and Jasper Gray - responsible for leading the lab, teaching others, helping others to investigate, showcasing the technical aspect, and documentation.

Active Participants: Behta Christian and Stephanie Argueta - Actively involved in investigating the software and troubleshooting.

Lab Participants: Anastasiya Velychko, Carl Myers, David Escobar, Dede Akpah, Juan Moreno, LaDarion Wells, Lance Tero, Mark Brown, Matthew Larson, Stephen Adeoye - Followed along and understood the principles being taught throughout the lab.
